## Finishing Options

### Glass Clips or Posts

- Mechanical clips or posts secure glass panels at intervals, balancing transparency with structural support.
- Flexible in design, allowing integration with metal or wood railing systems.

### Standoffs (Frameless Mounting)

- Minimal visible hardware, delivering a clean, architectural look.
- Preferred for modern designs where unobstructed views and visual light are priorities.

### Top Rail – Metal, Wood, Stainless Steel

- Caps the glass for added safety & rigidity while protecting the glass edge
- Metal and stainless steel offer a sleek, low-maintenance, commercial-grade finish
- Wood provides warmth and continuity, ideal for traditional or transitional spaces.
